RP RestoPulse

RESTAURANT OPERATIONS PLATFORM

Stop Kitchen Leaks. Know Your Real Profit On Every Single Dish.

A simple, powerful operational system designed for restaurant owners and chefs. Cut food waste, lock in recipe margins, and keep kitchens spotless every shift.

Dish Costing & Recipes

Accurate portion costs, live food margin % & chef SOP cooking instructions.

Overheads & Bills Allocation

Factors in monthly rent, staff salaries & electricity to reveal real take-home profit.

Food Waste Tracker

Fast 10-second waste logging by shift & reason. Cut wastage costs by 30-40%.

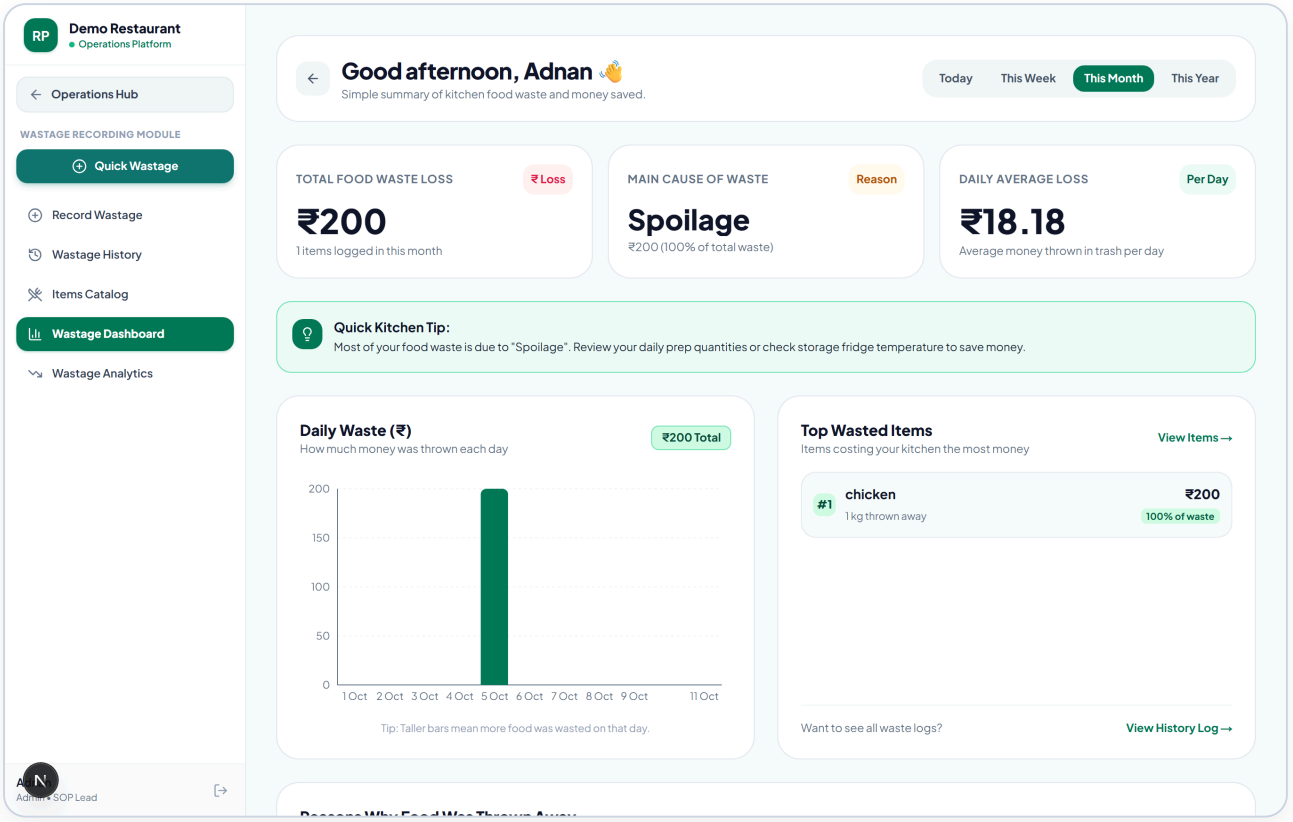

Kitchen Checklists & Audits

Daily opening/closing SOPs with required photo proof for guaranteed consistency.

DAILY OPERATIONS PULSE

Operations Dashboard

Your restaurant's central pulse. View daily sales revenue, food waste percentage, and overall financial health at a single glance without digging through spreadsheets.

💡 Why Restaurant Owners Love This

Restaurant owners are busy. In 30 seconds every morning, you immediately see if yesterday was profitable, whether kitchen food waste exceeded your 3% safe limit, and which shifts need attention.

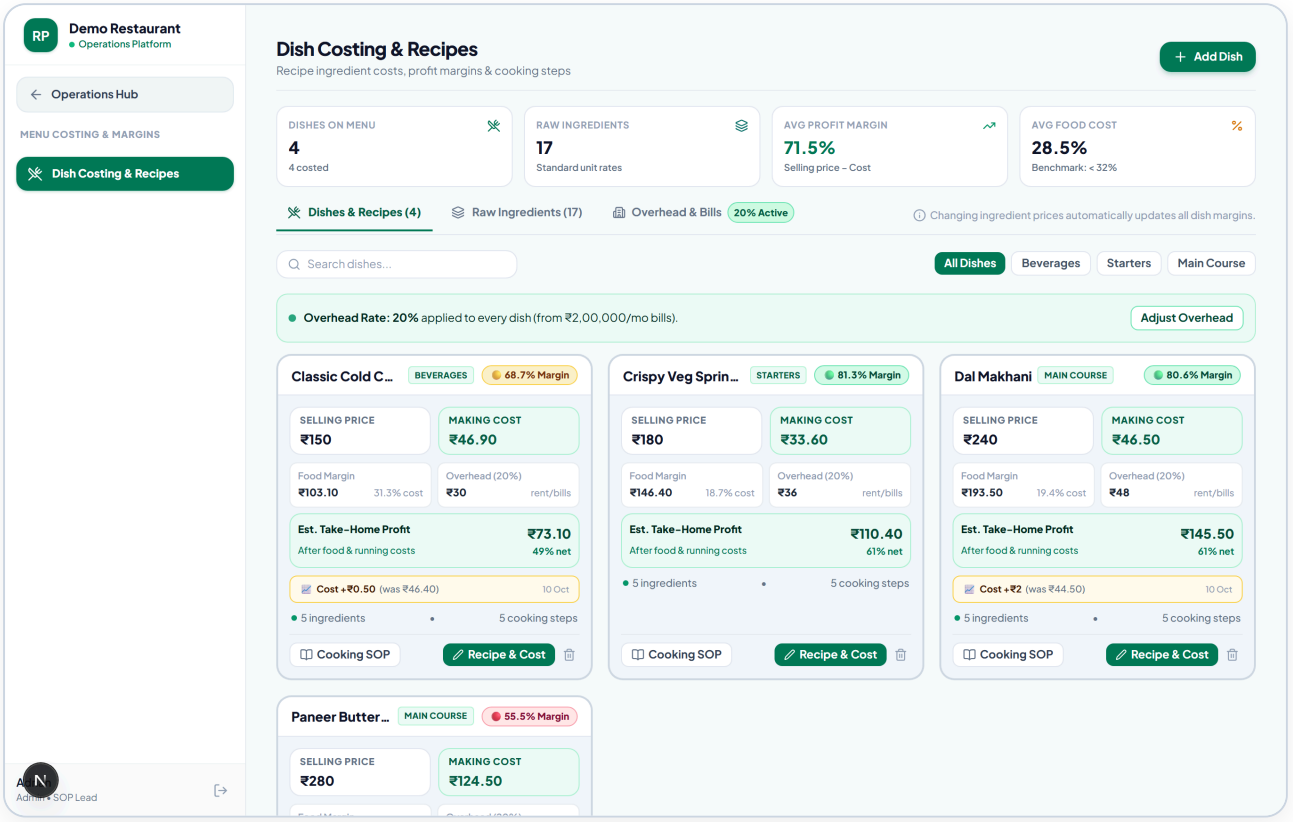

How To Use It in 3 Steps

1. Check the **Waste-to-Sales Gauge** (Green = Safe, Red = Alert).
2. Review **High-Loss Ingredients** to spot expensive leaks.
3. Track **Yesterday's Sales vs Today** to monitor growth trends.

MENU ECONOMICS & CONSISTENCY

Dish Costing & Recipes

Never guess if a dish is making or losing money. Calculate exact ingredient prep costs, live food margins, and store step-by-step cooking SOPs so any chef cooks with identical quality.

💡 Real Business Value

When raw ingredient prices spike (e.g. oil or chicken), RestoPulse automatically updates making costs across all affected dishes. You spot low-margin menu items before they hurt your monthly bank balance.

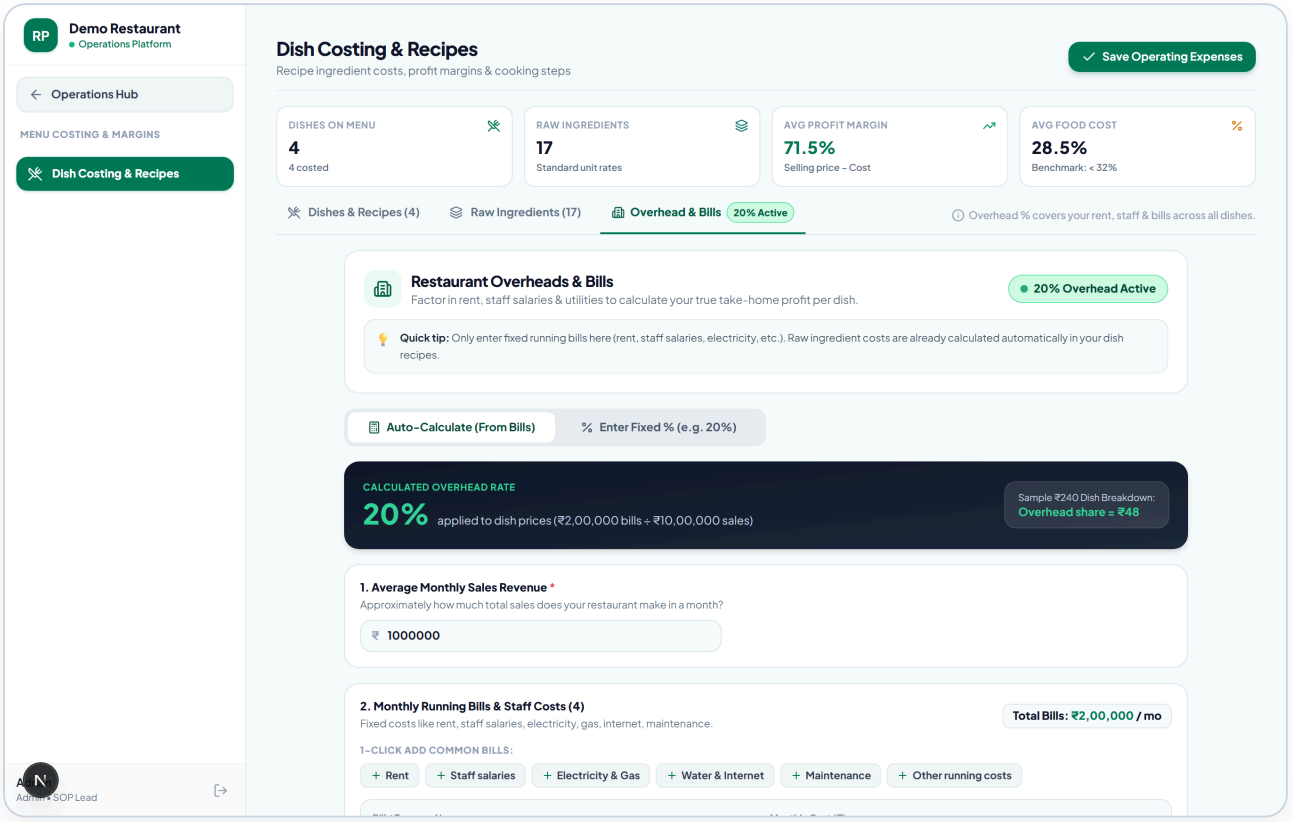

How It Works

1. Add **Raw Ingredients** with standard purchase rates (e.g., 1kg Paneer @ ₹320).
2. Build **Dish Recipes** with exact portion sizes per serving (e.g., 150g).
3. See exact **Food Margin %** & **Est. Take-Home Profit** live.

REAL WORLD COST ALLOCATION

Restaurant Overheads & Bills

A dish with a 65% food margin might still lose money once you pay restaurant rent and staff salaries. This module allocates your monthly fixed bills to every dish to reveal your real take-home profit.

💡 Why This Solves a Big Problem

Most restaurant POS software only calculates food cost. RestoPulse factors in monthly rent, kitchen staff salaries, and electricity bills so you know exactly how much net cash each plate generates.

2 Easy Ways to Set Up

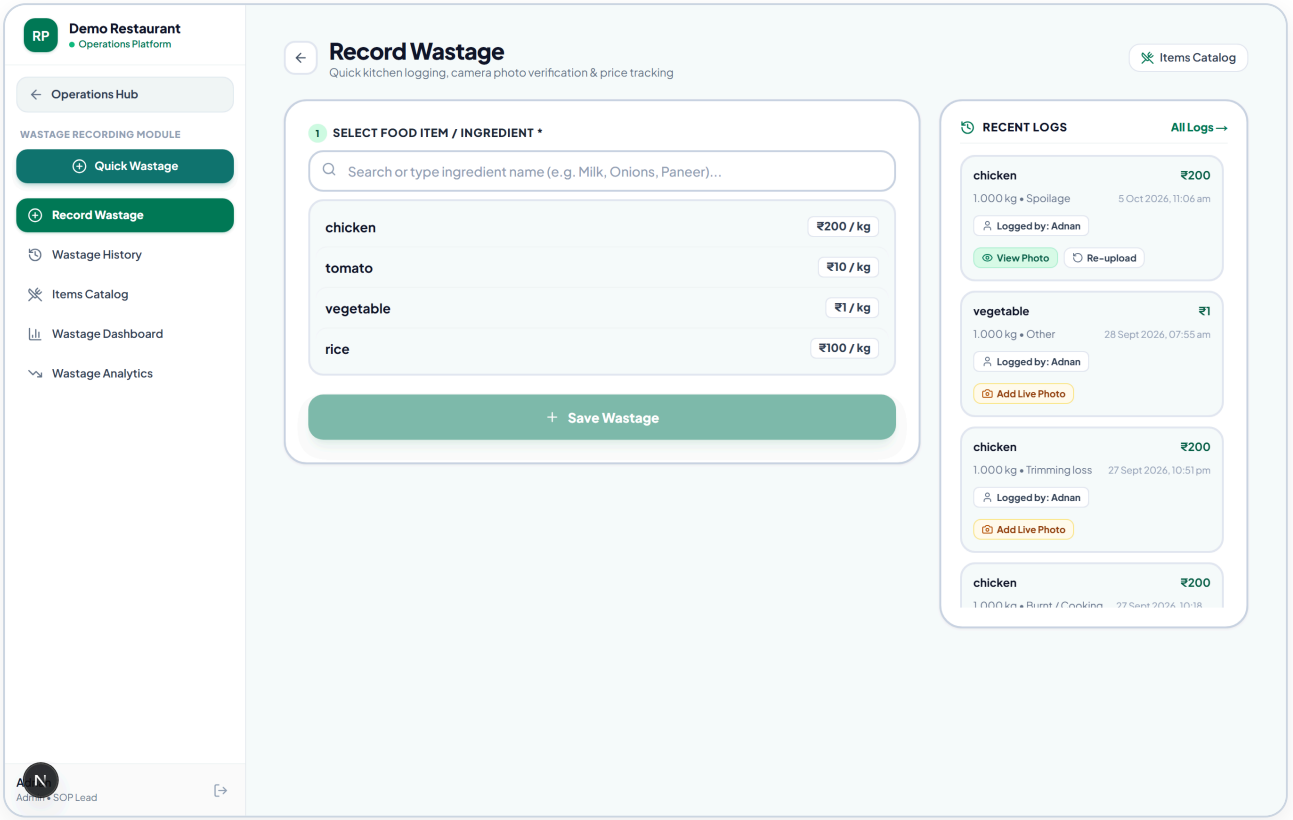

A **Auto-Calculate from Bills:** Enter monthly sales + click 1-click bills (Rent, Salaries, Electricity). RestoPulse computes your % rate automatically.

B **Enter Fixed %:** If you already know your rate, enter a flat overhead rate (e.g. 20%) in 5 seconds.

KITCHEN EFFICIENCY

Food Wastage Tracker

The average restaurant loses 4% to 8% of purchases directly into the kitchen bin. RestoPulse gives your staff a fast 10-second logger to track what was wasted, how much, and why.

💡 What Gets Measured Gets Controlled

When kitchen staff know food waste is logged by name, shift, and reason (burnt, spoiled, over-prepped), carelessness stops immediately. Restaurants typically recover ₹25,000 to ₹70,000/month.

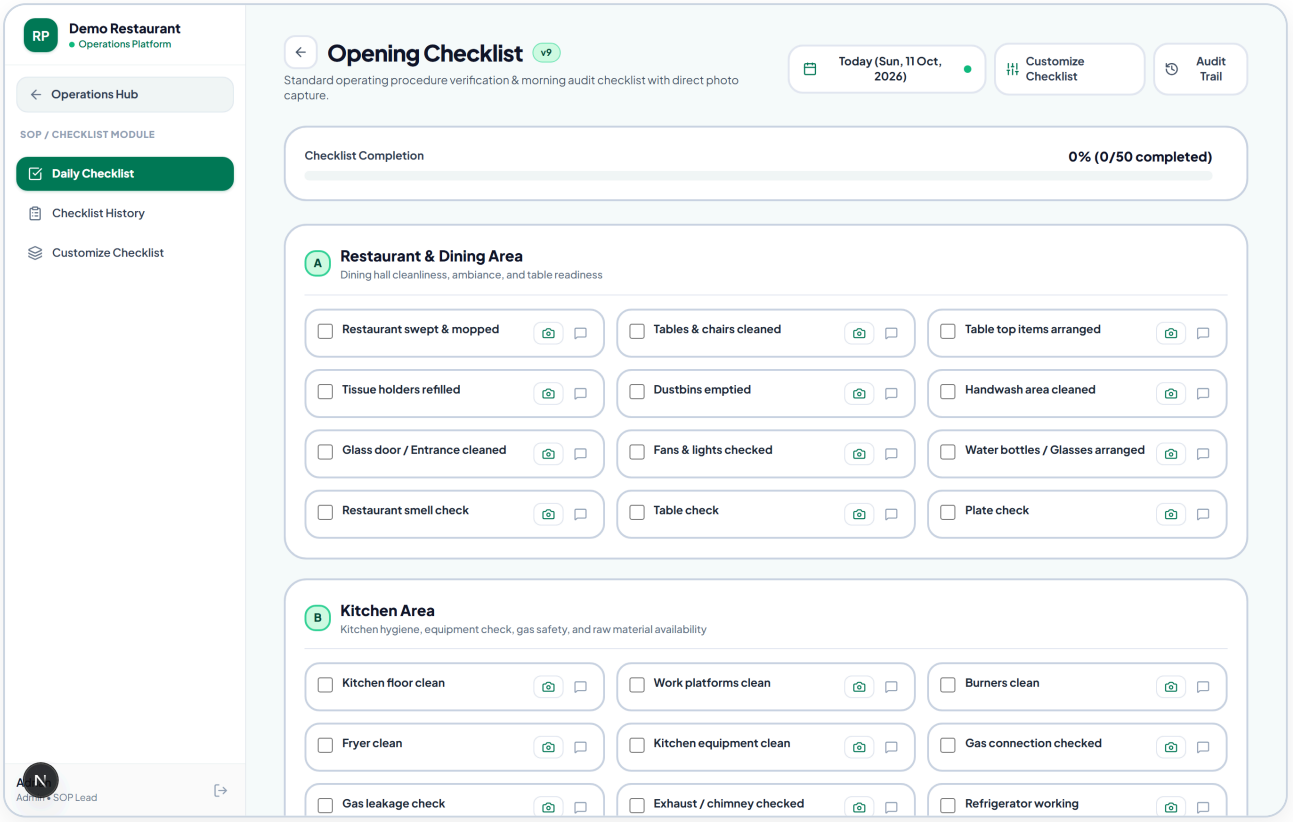

How Staff Use It

1. Select the wasted ingredient or prepared dish from a searchable list.
2. Enter weight or quantity (e.g., 1.5 kg) and tag the shift (Morning / Evening).
3. Select reason (Burnt / Expired / Preparation Error) and click **Log Waste**.

SHIFT ACCOUNTABILITY

Daily Kitchen Checklists & Audits

Replace lost paper checklists with digital opening, prep, and closing checklists. Staff tick tasks on their phones and upload live photo proof for deep cleaning, oil quality, and fridge temperatures.

💡 Total Peace of Mind for Owners

You don't need to stand inside the kitchen all night. Managers and owners receive an audit trail with timestamps and photos proving the kitchen was cleaned, gas valves were closed, and food was stored correctly.

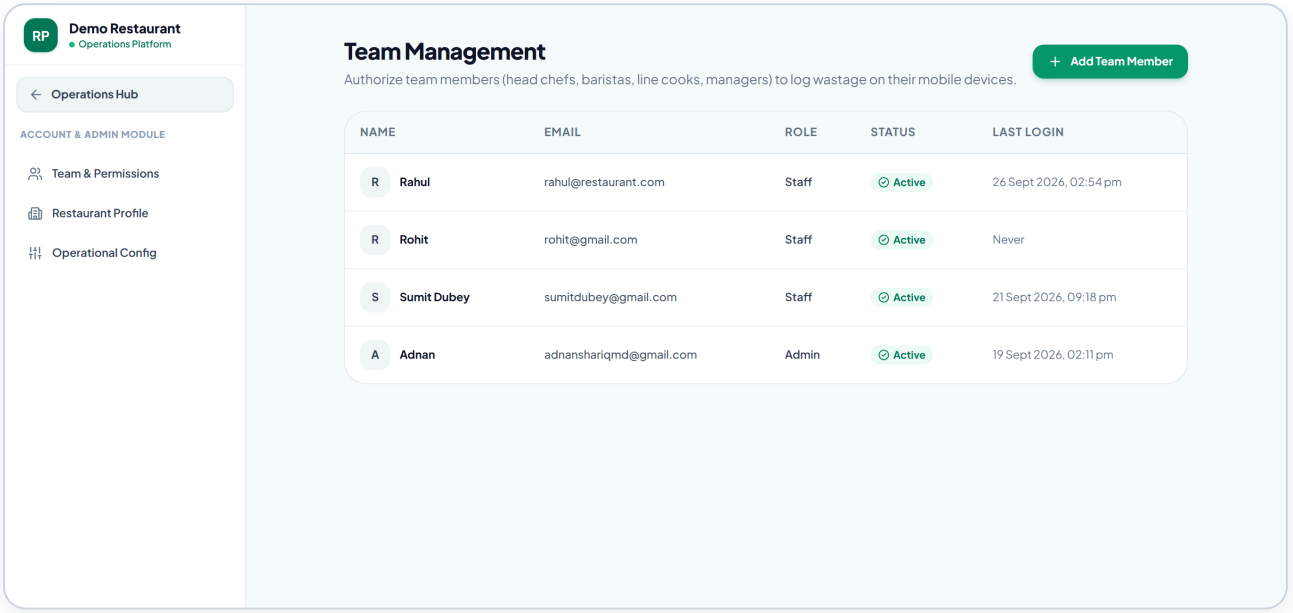

Simple Workflow

1. Staff open today's checklist on any smartphone or kitchen tablet.
2. Tick opening/closing checklist rows as duties are completed.
3. Snap required **photo proof** directly via camera and submit.

ROLE-BASED ACCESS CONTROL

Staff Management & Security

Give each staff member the exact right level of access. Kitchen cooks and prep staff log waste and complete checklists without ever seeing sensitive restaurant sales revenue, owner margins, or bank details.

Built Specially for Independent & Multi-Outlet Restaurants

RestoPulse works seamlessly on mobile phones, tablets, and desktop computers. Zero expensive hardware needed. Set up in under 30 minutes.
