RP RestoPulse

RESTAURANT OPERATIONS & PROFIT SOFTWARE

BUILT FOR RESTAURANT OWNERS & KITCHEN MANAGERS

The Simple Kitchen App That Stops Profit Leaks In Your Restaurant.

RestoPulse solves the 3 biggest operational headaches every restaurant owner faces: staff skipping cleaning duties, rising ingredient costs eating your margins, and food getting thrown in the bin.

PRIORITY 1 • HYGIENE

Daily Kitchen Checklists & SOPs

Staff tick opening/closing tasks with **mandatory live camera photos**. Guaranteed kitchen cleanliness & staff accountability.

PRIORITY 2 • MARGINS

Dish Costing & Overheads

Know exact ingredient making costs, food margins, and factor in monthly rent & staff to see **true take-home profit** per dish.

PRIORITY 3 • SAVINGS

Food Wastage Recording

Fast 10-second waste logging by shift and reason (burnt, spoiled, over-prepped). Cut kitchen waste by **30% to 40%**.

CENTRAL COMMAND CENTER

Restaurant Operations Hub

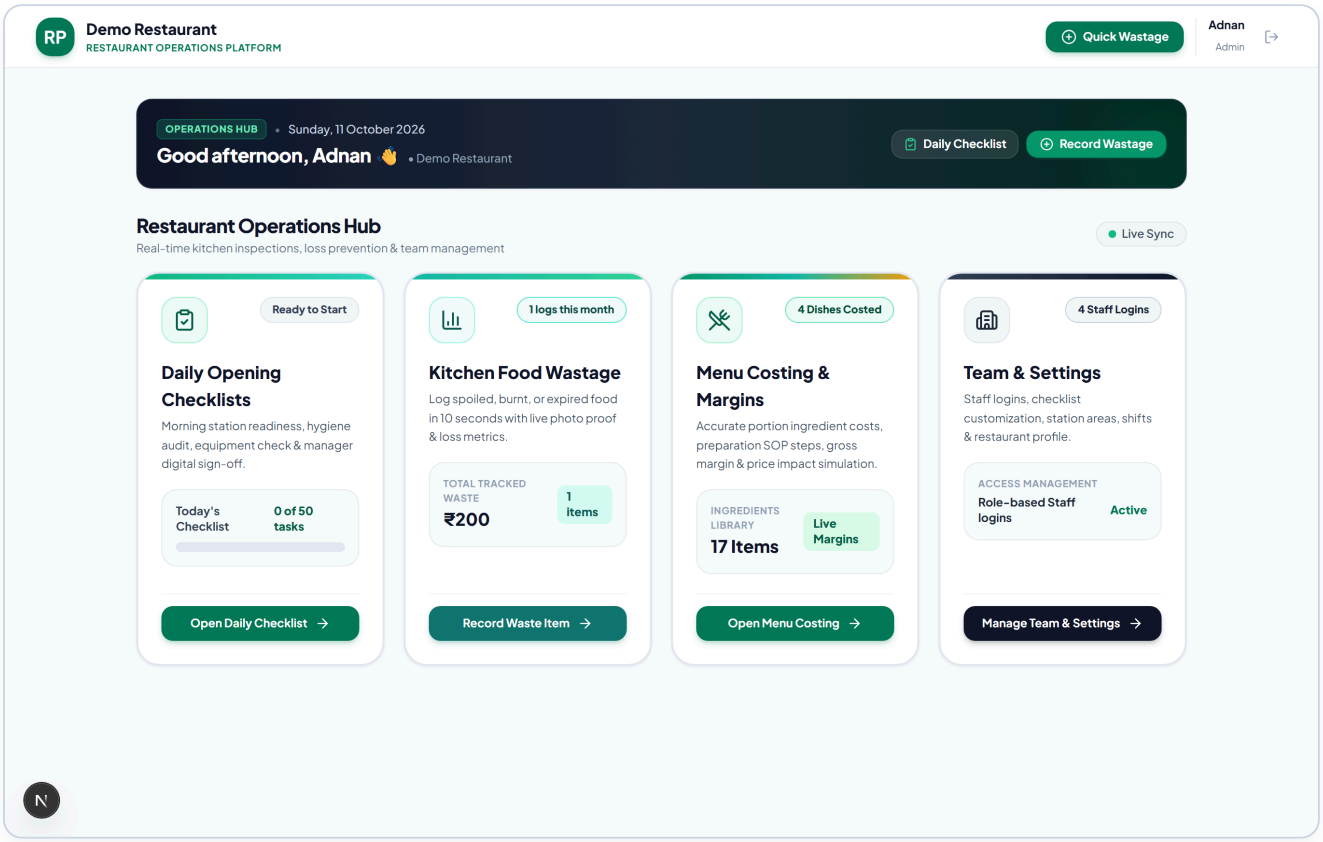

Your kitchen team's daily home screen. All operational modules are accessible in clean, visual cards with real-time status badges and today's progress.

THE RESTAURANT PROBLEM

Kitchen staff hate complicated software. If a system takes more than 2 minutes to navigate, chefs stop using it and go back to unorganized paper.

HOW RESTOPULSE SOLVES IT

A clean 1-click launchpad. Staff open their shift checklist or log waste in seconds with zero training required.

Why Owners Love The Hub

When you open the app, you immediately see today's date, checklist completion % (e.g. 50% completed), recorded wastage, and active dishes without clicking through complex menus.

3 Quick-Action Modules

1. **Daily Opening Checklists:** Station readiness & digital sign-off.
2. **Record Kitchen Wastage:** 10-second food loss tracking.
3. **Dish Costing & Recipes:** Live recipe economics & overheads.

PRIORITY FEATURE 1

Daily Kitchen Checklists with Live Camera Proof

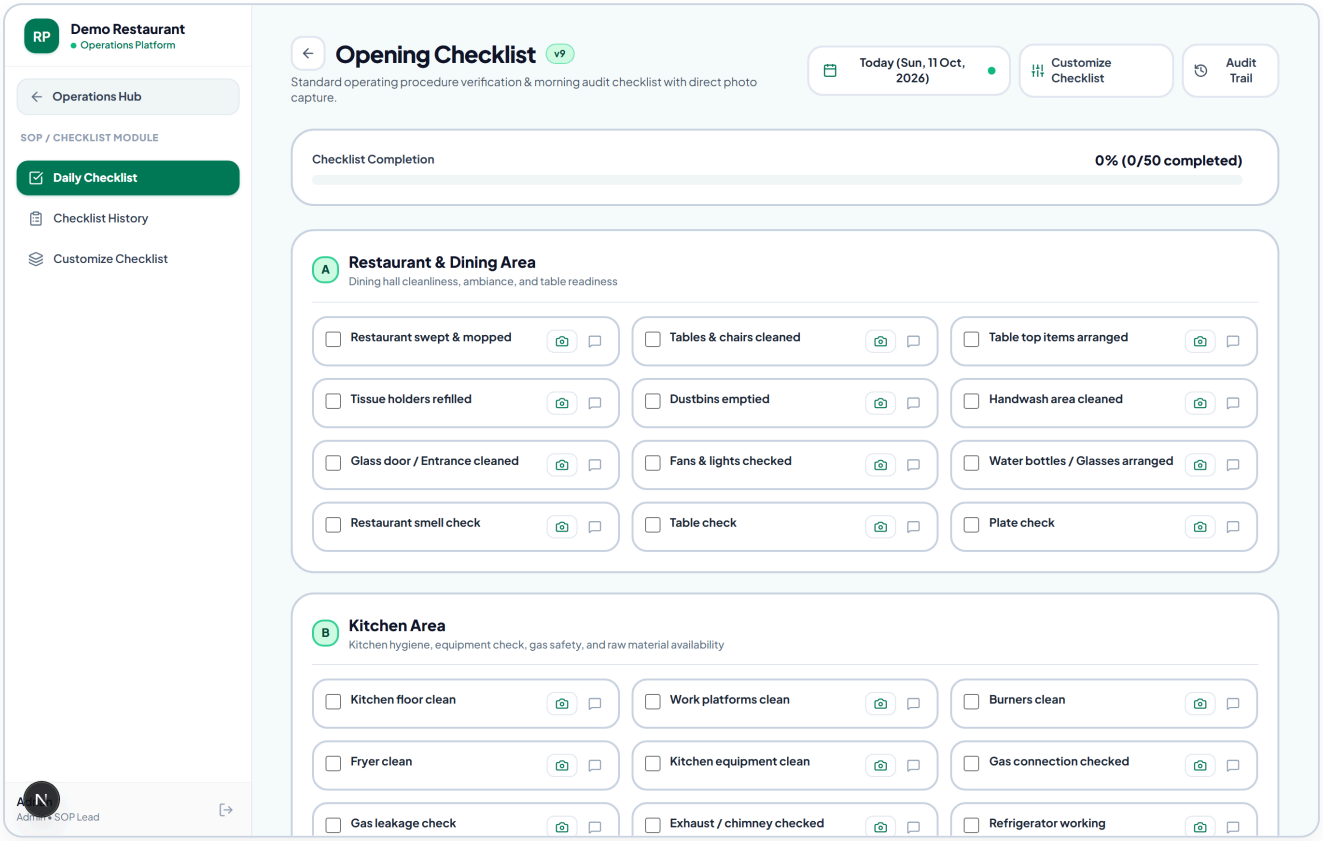

Ensure opening prep, deep cleaning, oil quality, and gas shut-off are completed properly every shift—with mandatory live photo verification.

THE PROBLEM RESTAURANT OWNERS FACE

Staff "pencil-whip" paper checklists—ticking all boxes in 10 seconds without actually cleaning fryers, checking fridge temperatures, or shutting gas valves. Owners stress when away.

HOW RESTOPULSE SOLVES IT

Staff cannot fake tasks. Critical duties require a **live camera photo** taken inside the kitchen. Time-stamped logs hold every staff member 100% accountable.

Live Camera Proof & Accountability

Real Proof, Not Paper Checkmarks

When staff clean the exhaust, check oil color, or restock stations, they click the camera icon and snap a photo. Photos are tied to the staff member's login with exact timestamps.

How Staff Use It Every Day

1. Staff open today's checklist on any smartphone or tablet.
2. Tick duties by station (Dining Area, Kitchen, Storage, Bar).
3. Snap required live camera proof and submit for manager review.

PRIORITY FEATURE 2

Dish Costing & Standardized Recipes

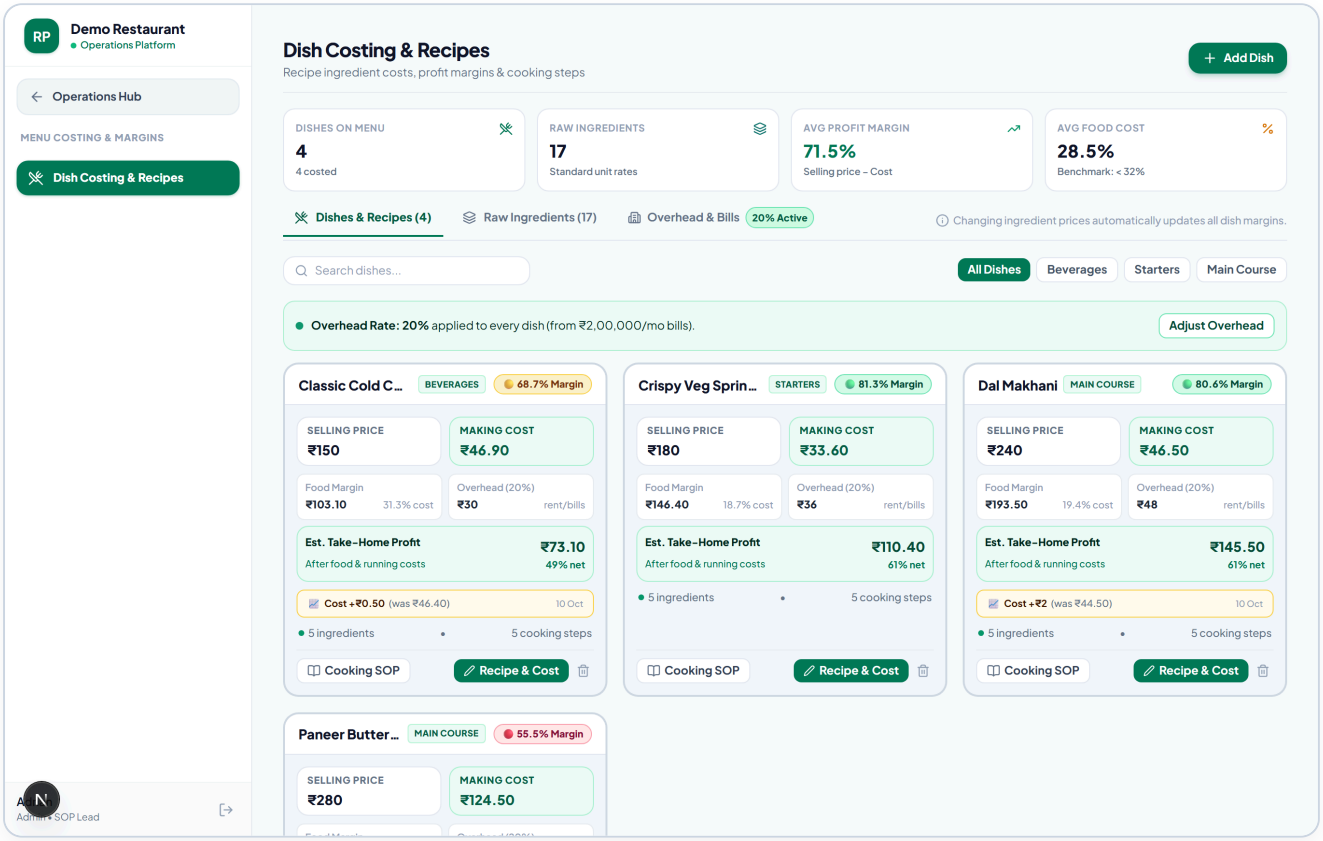

Calculate the exact ingredient making cost and food margin % for every dish on your menu. Plus, store step-by-step cooking SOPs so any chef cooks with identical taste.

THE PROBLEM RESTAURANT OWNERS FACE

Raw ingredient prices (paneer, chicken, oil, vegetables) fluctuate constantly. Without portion costing, dishes silently become unprofitable while you keep selling them at old rates.

HOW RESTOPULSE SOLVES IT

You enter raw ingredient purchase rates once. RestoPulse automatically calculates the exact making cost and profit margin for every dish on your menu.

Automated Recipe Economics

Instant Margin Visibility

Every dish card shows: **Selling Price**, **Making Cost**, **Food Margin %** (green/yellow/red benchmark), and step-by-step cooking SOP instructions for chefs.

How It Works in 3 Steps

1. Add Raw Ingredients & purchase rate (e.g. 1kg Paneer @ ₹320).
2. Build Recipe with portion quantities (e.g. 150g Paneer per dish).
3. View exact making cost, margin %, and estimated net profit.

PROFIT PROTECTION

Restaurant Overheads & Bills Allocation

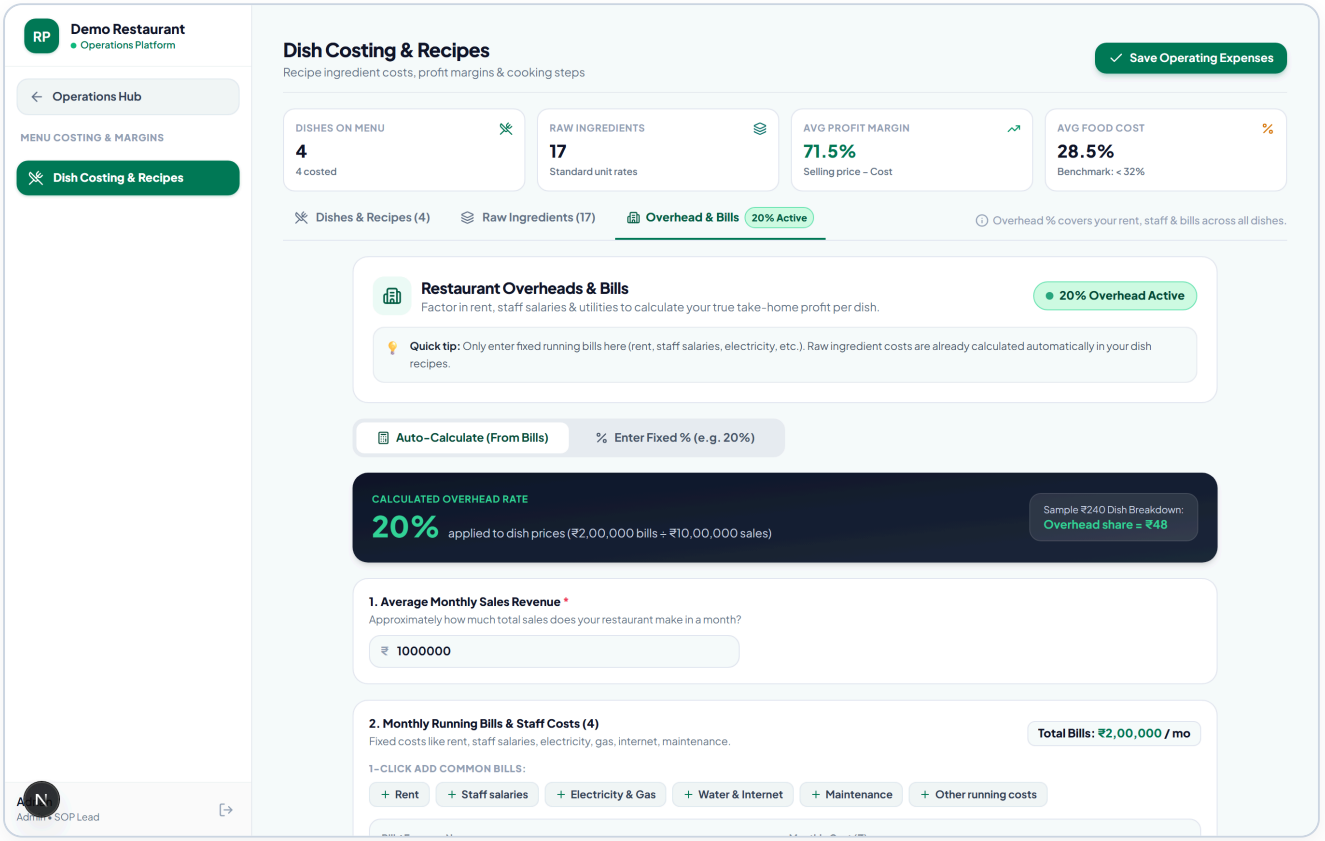

Food cost is only half the story. Factor in your fixed monthly bills (rent, staff salaries, electricity) to calculate your true take-home profit on each plate.

THE PROBLEM RESTAURANT OWNERS FACE

A dish that looks profitable on food cost alone (e.g. 60% food margin) might actually lose money once you pay restaurant rent, kitchen helpers, and monthly electricity bills.

HOW RESTOPULSE SOLVES IT

RestoPulse allocates your monthly overhead percentage across every dish. You see your **true take-home profit** per serving after food cost AND running bills.

Real Take-Home Profit

Sample ₹240 Dish Breakdown

Customer pays: **₹240** • Food cost: **₹84** • Overhead share (20% for rent/bills): **₹48** • **Real Take-Home Cash: ₹108**. Clean, clear, zero guesswork!

2 Simple Setup Options

A **Auto-Calculate from Bills:** Enter monthly sales + 1-click bills (Rent, Salaries, Electricity). Rate calculates automatically.

B **Enter Fixed %:** Directly enter an overhead rate (e.g. 20%) in 5 seconds.

PRIORITY FEATURE 3

Daily Food Wastage Tracker

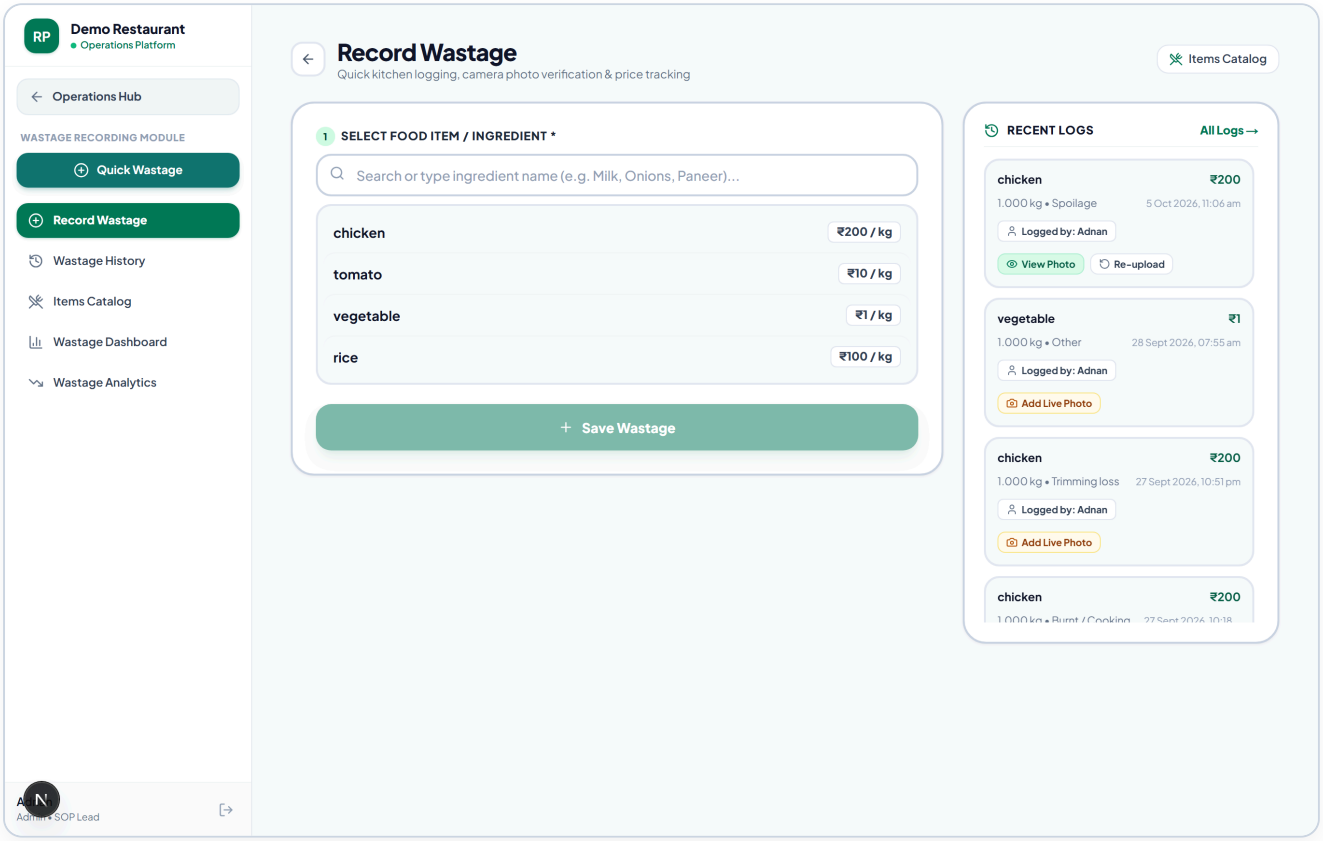

Stop throwing thousands of rupees into the kitchen trash bin. Give staff a lightning-fast 10-second logger to track wasted food by shift and exact reason.

THE PROBLEM RESTAURANT OWNERS FACE

The average dining restaurant loses 5% to 8% of all food purchases to trash (burnt gravies, expired dairy, over-prepped rice). That is ₹30,000 to ₹80,000 thrown away every month.

HOW RESTOPULSE SOLVES IT

When kitchen staff know food waste is logged with their name, shift, and reason, carelessness stops immediately. Waste drops by 30% to 40% in the very first month.

10-Second Fast Logging

Instant Rupee Loss Visibility

RestoPulse automatically links wasted items to purchase prices, showing the exact rupee value thrown away. Owners identify top money-losing ingredients and fix the root cause.

How Staff Log in 3 Steps

1. Pick the wasted item from the searchable list (Chicken, Rice, Milk).
2. Enter weight/quantity (e.g. 1.5 kg) and tag the shift (Morning / Evening).
3. Select reason (Burnt / Spoiled / Over-prepped) & tap **Log Waste**.

EXECUTIVE OVERVIEW

How RestoPulse Protects Your Restaurant

Three powerful modules working together to keep your kitchen clean, consistent, and profitable every single day.

	The Daily Kitchen Pain	How RestoPulse Solves It
1. Daily Checklists & SOPs	Staff skip cleaning & hygiene duties; paper checklists are easily faked.	Digital checklists with **required live camera photos** & time-stamped staff accountability.
2. Dish Costing & Overheads	Rising ingredient costs silently wipe out profits without owners realizing.	Real-time recipe portion costs, food margin %, and monthly bills allocation for true take-home profit.
3. Food Wastage Tracker	₹30,000–₹80,000/month lost into the kitchen bin due to spoilage and over-prep.	Fast 10-second waste logging by shift and reason. Recovers lost profit in the first 30 days.

Zero Hardware Required • Up & Running in 30 Minutes

RestoPulse works directly inside any browser on smartphones, kitchen tablets, or desktop computers. Your kitchen staff only need 3 to 5 minutes a day.

30–40%
Reduction in Food Waste Losses in Month 1

< 5 Mins
Daily Staff Time Required per Shift

100%
Visibility into Real Take-Home Cash per Dish
